## **DETAILED ACTION**

### ***Drawings***

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Allowable Subject Matter***

2. Claims 1 and 2 are allowed.

The following is an examiner's statement of reasons for allowance: The claims in the instant application have not been rejected using prior art because no references, or reasonable combination thereof, could be found which disclose or suggest an annular locking step provided at a predetermined position on an outer circumferential surface of the brush unit to be stopped by the annular step of the inner cap and a spring seat provided on an upper surface of the annular locking step to be depressed. The best prior art of record appears to be the Habatjou reference (US 7,429,141). Habatjou discloses a case with a spring loaded mascara brush comprising a case body (22) with a neck (21) provided at an upper end of the case body having an external threaded part (20), an outer cap (1) to cover an upper portion of the case body, a brush unit with a

Art Unit: 3732

brush stem (2) provided at a lower portion of the brush unit and a brush (3) (see Figure 3). The case further comprises an inner cap (14) having a shape of a hollow cylinder which is opened at the top and bottom ends (11, 12) and is fastened to an interior of the outer cap (via 15), an internal threaded part (19) is provided on an inner circumferential surface of a lower portion, and an annular step integrally projecting from the inner circumferential surface of the inner cap (see Figure 3). The claims have not been rejected using prior art because no references, or reasonable combination thereof, could be found which disclose or suggest a predetermined position on an outer circumferential surface of the brush unit to be stopped by the annular step of the inner cap and a spring seat provided on an upper surface of the annular locking step to be depressed in combination with the features from claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
